# CUSTOMIZABLE

All products are assembled in our plant in Los Angeles, California.  
Each panel is built to your company's specifications.

We offer indoor panels that can either have a power supply cord or a panel mount inlet. Voltage ranges 120/240 Volt 120/208 three phase 277/480 Volt (30 circuit only)

**12 Circuit Panel**  
125 Amp

**18 Circuit Panel**  
150 Amp

# flat wire **EXTENSION CORDS**

## Introducing the 5-Wire Festoon

The only flat 5-wire cable that is currently UL listed for convention center usage.

We carry 1000 foot  
reels available in:

**12/5**

**10/5**

**6/5**

**4/5**

We also offer **Molded Extension Cords** with L21-30 & L21-20 plugs and connectors. 15', 30', 60' and 90' in 12/5 with L21-20 connectors are standard stocking items. The L21-30 on 10/5 is custom built and available upon request.

On the larger size cables 6/5 and 4/5, we can offer these as completed assemblies, with your choice of Woodhead Y5-60 (our J5-60), 560P9W, mini cams or full-size cams.

On the 4/5 Festoon, we can offer the Veam Style J5100 series, 5100P9W, or full-size cams.

# BOOTH STRINGERS

## Standard 30 foot 3-Box Booth Stringer

Our Standard Booth Stringer is designed to efficiently distribute 20A-125 Volt (NEMA 5-20R) outlets along the backwall of standard 10' by 10' exhibition booths. This stringer provides power for up to a maximum of six back-to-back tradeshow booths.

Our Stringers are spaced every ten feet between boxes along the cord

### Available Cable Configurations:

- Our 30' 12/5 Flat Festoon Cable has a low profile that minimizes trip hazards and makes it ideal for use under walls and returns
- Our standard 30' 12/5 STW Extra Hard Usage Round Cable resists cuts and abrasions and will provide years of heavy duty use

## 30' 12/5 STW (600V) Molded Quad Box Stringer

Our Booth Stringers with Molded Quad Boxes and Connectors are a cost-effective alternative to the standard booth stringers available in the market today. These stringers distribute three (3) 20A-125 Volt (NEMA 5-20R) boxes along the back wall of standard 10' by 10' exhibition booths for a total of 12 outlets. One stringer provides power for up to a maximum of six back-to-back tradeshow booths. Our molded on quad boxes are virtually indestructible and crush-proof. Just like our molded connectors, these molded boxes will not pull away from the cord body.

# DOG HOUSES

The standard ProPack™ Dog-House is designed to provide three (3) separate, 20A-120V (NEMA 5-20R) circuits in a confined space. These Dog-Houses are ideal for use at tradeshows, events, concerts, and wherever compact indoor multi-outlet power sources are required.

- Our ProPack™ Dog-House has a built-in 18 inch twist lock power supply cord, making the need for a dog bone adapter unnecessary.
- Our heavy duty molded male (NEMA L21-20P) 20A-125V twist-lock plug will not pull away from the cord body like mechanically applied ends do

- These Dog-Houses utilize low profile boxes with specially designed strain reliefs to prevent the cable from pulling off
- These Boxes are manufactured from high-impact Tarflon™ polycarbonate that withstands shock, cracks and breakage typically seen at rough tradeshow environments
- Our Dog-House box has three (3), phase color coded (Red, Blue, Black), heavy duty 20-amp duplex receptacles (NEMA 5-20R) for a total of six (6) outlets per box
- The Red, Blue and Black phase coding makes it easy for electricians to detect which breaker has been tripped

#### Available configurations:

A pass through version (male power supply cord on one end and female power supply cord on the other end) can be made by special request

**L21-30 10/5 Flat Festoon Cable Dog house

# Black Widow Temporary Power Distribution Box

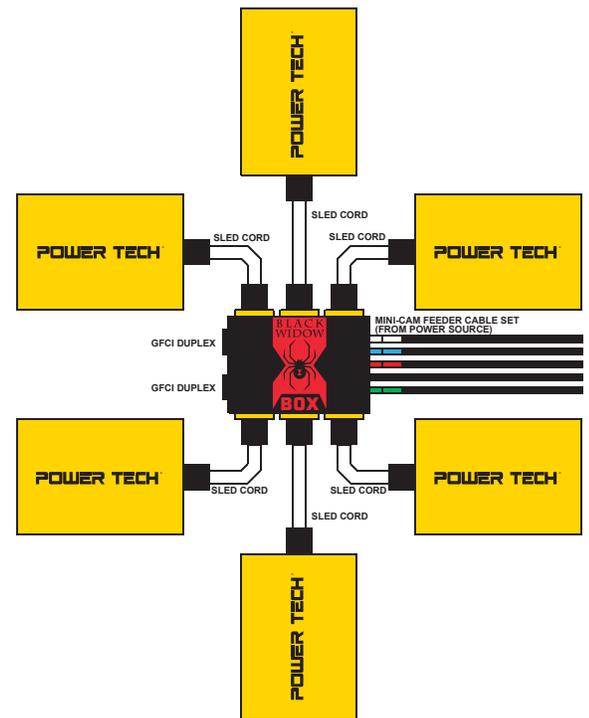

**18 Circuit Panel**  
200 Amp

**12 Circuit Panel**  
200 Amp

## FEATURES

Our Black Widow Box is our most compact 50A distribution unit capable of feeding up to 18 Spider Boxes at a time. When connected to the generator or power pole via a set of 400A camlock inlets, the Black Widow feeds power through (6) 50A CS6369 outlets. As a result, each outlet has the capacity to power up to 3 sequentially linked spider boxes\*. In addition, our Black Widow box can be custom made with other components to accommodate other applications.

Feeds 6  
spider or scorpion  
boxes

\*We do not recommend daisy-chaining more than 3 spider boxes per outlet due to voltage and amperage drop. Tools and equipment are only capable of operating up to a 10% drop in power, which is the power output of approximately 3 spider boxes connected 100 feet apart.

35FT10FEST | 50FT10FEST | 60FT10FEST  
65FT10FEST)

## 10/5 30A Convention Center Feeder Cables

### FEATURES

Our Convention Center Feeder Cable is designed to deliver temporary power to stringers, doghouses and quad boxes from the main power panel during tradeshows and events.

This is the industry's only feeder cable with heavy duty molded on L21-30 twist lock plugs and connectors, making it ideal to handle the rigors encountered at convention centers, exhibit halls, and audio-visual applications. Our 10/5 Flat Festoon Feeder Cable has a low profile that minimizes trip hazards and makes it ideal for use under walls and returns.

# Type "W" Camlock Extension Cords (2,000V) with 400A Camlocks

## FEATURES

Our Type W Camlock Extension Cords supply high voltage, high amperage temporary power from portable power generators to power distribution panels. They are also used to draw power directly from the grid, supply power to and from distribution panels, and for shore power applications. These premium hard service Type "W" single conductor cables with 400A Camlock connectors are used when double insulated power generation cable is required. These cables are reinforced with an open polyester braid separating the insulation and jacket. This type of construction offers superior mechanical strength, durability and flexibility when compared to standard Stage Lighting Cable.

- Ideal for use on sites where heavy equipment is used (motorized equipment, cranes, lifts, conveyors etc.)
- 2000 Volt MSHA Rated Type W Cable
- Premium reinforced vulcanized CPE (Chlorinated Polyethylene) outer rubber jacket
- Tough & flexible EPR (Ethylene Propylene Rubber) inner insulation
- Cable suitable for continuous submersion in water
- Available sizes: 1/O, 2/O, and 4/O (smaller cable will use lesser rated amperage camlocks)
- UL, cUL & CSA listed cables and camlocks
- Banding available upon request

# Stage Lighting Camlock Extension Cords (600V) with 400A Camlocks

## FEATURES

Our Stage Lighting Camlock Extension Cords deliver temporary power from portable power generators to power distribution panels. They also supply power from distribution panels to breakout boxes where individual equipment and tools are plugged into. Used primarily in the entertainment industry, these are the most widely and commonly used generator power distribution cables for studio set lighting, audio-visual, tradeshow, special events, convention centers, fairgrounds, and other non-mining or light duty industrial applications.

- Suitable for use in general power distribution applications where high voltage or double-insulation isn't a requirement
- 600 Volt abrasion resistant all-weather jacket withstands severe environmental conditions
- Premium vulcanized CPE (Chlorinated Polyethylene) rubber jacket
- Single conductor fully annealed stranded bare copper for excellent flexibility
- Available sizes: 1/O, 2/O, and 4/O (smaller cable will use lesser amperage camlocks)
- Cables are MSHA, UL & CSA listed
- Banding available upon request

# Temporary Power Extension Cords

D19004168-50' | D19004167-100'

**50A 6/4 SOOW with CS6364 & CS6365 Ends**

## FEATURES

Our heavy duty 50A 6/4 SOOW Temporary Power Extension Cords are used with “spider boxes” or “temp power boxes” to provide power from a temporary power pole or generator to any jobsite location. They are also used to string or daisy-chain multiple spider boxes when needed. Spider Boxes have various outlets including 20A, 30A and 50A that provide electrical outlets for most portable power tools and lighting equipment.

# GPS Transformer Power Carts

## FEATURES

Our GPS Transformer Power Carts act as the main link between your power source and power distribution, eliminating the need for extra generators and/or power cabling. Our power carts can be customized with various inlets and outlets to fit any job requirement. GPS carts can be built as a step-up or step-down transformers with primary and secondary power distribution. We use only premium components to accommodate various applications and to ensure reliable portable power. Our streamlined design allows these carts to fit through standard “3-O” doors (3 feet or 36 inches), for maximum portability and ease of transfer. Equipped with heavy-duty swivel casters, our carts can be moved easily through various surfaces at the jobsite.

- Available in 15 to 300 kVA transformer configurations
- Built for easy fork-lift usage
- NEMA 3R weatherproof enclosure for outdoor applications
- Powder coated enclosures, frames and stands for durability and corrosion resistance
- Built with UL Listed components
